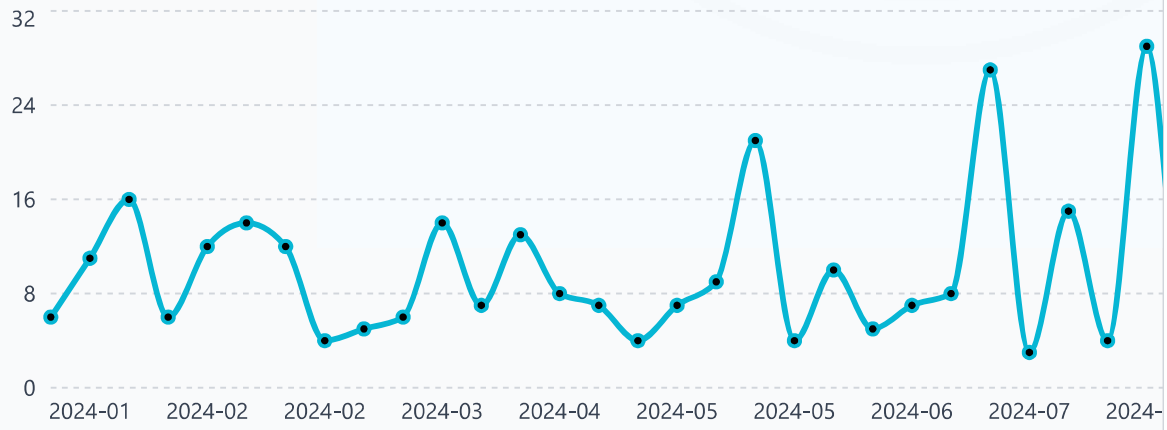
Trend

MoM Trend: Month-over-month trend for quantity

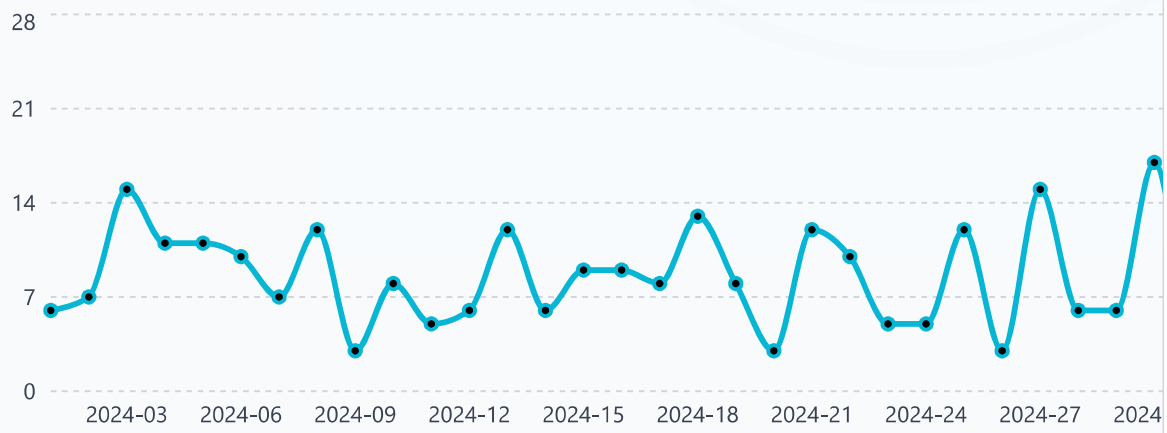
The month-over-month trend for quantity appears to show a decline in Clothing sales, from 12 in February 2024 to 5 in March 2024, and a decrease in Electronics sales, from 14 in February 2024 to 6 in March 2024. In contrast, Food sales have remained relatively stable, with 12 units sold in February 2024 and 14 units sold in March 2024. The Software category saw a significant increase from 4 units in February 2024 to 7 units in March 2024, which may indicate a rebound in sales.



Trend

WoW Trend: Week-over-week trend for quantity

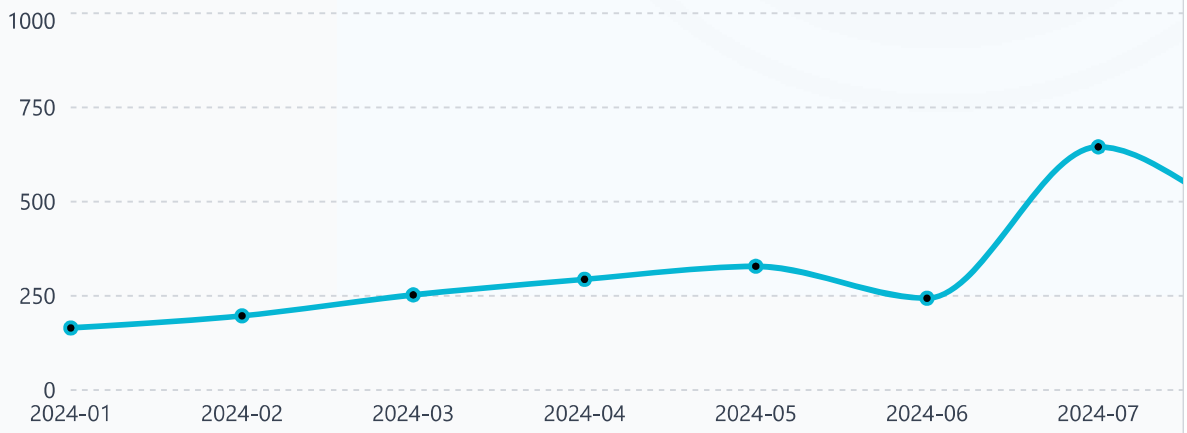
The quantity trend appears to show a notable increase in 2024-03 with 15 units, which is significantly higher than the preceding weeks, such as 2024-02 with 7 units. This spike may indicate a seasonal fluctuation or an unusual event, as the quantities in subsequent weeks, like 2024-04 with 11 units, are lower but still relatively stable. The quantity in 2024-09 with 3 units is a significant drop, being the lowest value in the period, and confidently indicates a substantial decline in demand or sales.



Trend

MoM Trend: Month-over-month trend for unit_price

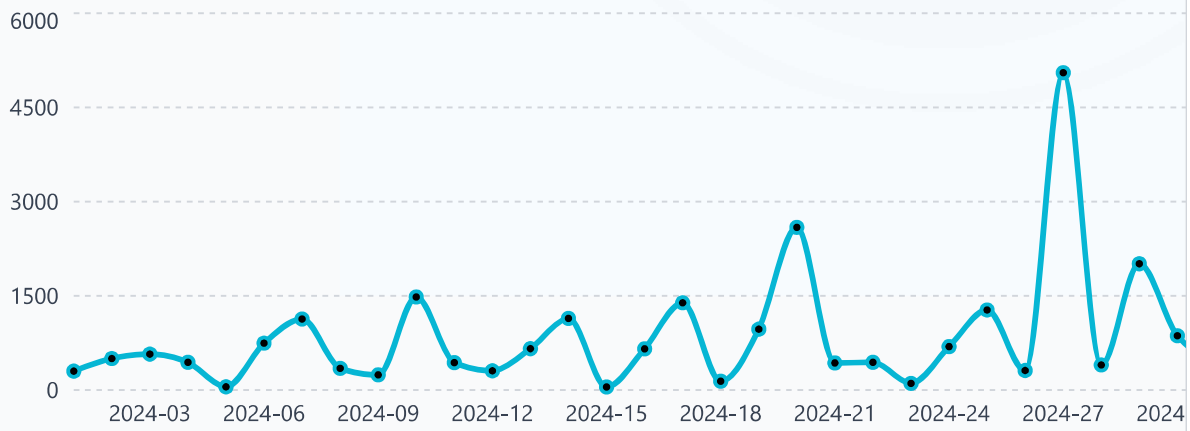
The unit price has been increasing overall, with a notable jump from $293.72 in April 2024 to $328.22 in May 2024. However, the significant spike to $909.39 in September 2024 appears to be an outlier, and the drop to $243.54 in June 2024 may indicate a seasonal fluctuation. The extreme increase to $645.22 in July 2024 is a clear anomaly, deviating substantially from the preceding months.



Trend

WoW Trend: Week-over-week trend for unit_price

The unit price trend appears to show significant volatility, with a notable increase from $299.97 in January 2024 to $499.98 in February 2024. However, the most striking change is the sharp spike to $1479.97 in October 2024, which is a clear outlier in the data. This extreme value may indicate a significant shift in the market, particularly when compared to the relatively stable prices of $304.97 in December 2024 and $239.98 in September 2024.



Trend

MoM Trend: Month-over-month trend for total_revenue

The total revenue for Software has consistently increased month-over-month, with a significant jump from $1999.94 in January 2024 to $3549.93 in March 2024. This trend appears to show a strong growth pattern, particularly in the Software category, where revenue has more than doubled in just two months. The Electronics category also saw a notable increase from $884.86 in February 2024 to $1629.94 in March 2024, which may indicate a rebound in sales.
